Module 1 Assignments
Use Blackboard for all submissions; due 1/18

1. Personal Introduction

Proceed to the Discussion Forum link in Blackboard's course menu and complete the Personal Introductions forum. In your introduction, please provide the following information:

- Name
- Program (or course) of study
- Why you are taking this course and what do you expect to gain from it?
- Work experience – are you currently employed? Where? Past employment?
- Personal (if you feel comfortable sharing any personal information) -- share one or two personal pieces of information so that your classmates will know a bit about you. (optional)
- Photo (optional)

2. Professionalism

Proceed to the Discussion Forum link and share your thoughts about what it means to be a professional. More specifically, define the characteristics a true professional must have.

3. Social Problem Identification

This week we are going to talk about the world’s problems. There are issues as simple as how to teach your children to tie their shoes….to achieving world peace.

We want to consider something in between. Interactive software could be created for teaching children how to tie their shoes, but we will never achieve world peace with software.

Think about the elements of life that could be improved with the use of computer-based technologies. You are required to select a societal problem that needs a software-based solution. Post this problem and its characteristics in the appropriate Discussion Forum.
