

## CS 381 Solutions to Homework 10

Textbook pp. 581 - 583:

4 (a) Not reflexive, not symmetric, transitive, antisymmetric

(b) Reflexive, symmetric, transitive, not antisymmetric

30 (b)  $R_1 \cap R_2 = R_1$

(c)  $\emptyset$

32.  $S \circ R = \{ \langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 2, 1 \rangle, \langle 2, 2 \rangle \}$

50 (d) Since  $R$  and  $S$  are reflexive, for every  $a$  in  $A$ ,  $\langle a, a \rangle \in R$  and  $\langle a, a \rangle \in S$ .

Hence  $\langle a, a \rangle$  is not in  $R - S$  for any  $a$  in  $A$ . Hence  $R - S$  is irreflexive.

p. 597:

32 for 27: Not reflexive, not irreflexive, symmetric, not antisymmetric, not asymmetric, not transitive.

32 for 28: Reflexive, not irreflexive, symmetric, not antisymmetric, not asymmetric, transitive.

pp. 606 - 607:

2. The set of ordered pairs of integers

9 for 6: Add the following arrows:  $\langle a, c \rangle, \langle b, a \rangle, \langle c, b \rangle$

20 (c)  $\langle a, b \rangle \in R^*$  if and only if  $b$  can be reached from  $a$  by taking a number of flights.

24.  $R^2$  is not necessarily irreflexive.

For example let  $R = \{ \langle a, b \rangle, \langle b, a \rangle \}$  over  $A = \{a, b\}$ , where  $a \neq b$ . Then  $R$  is irreflexive but  $R^2$  is reflexive.
