

CS 620 –Introduction to Data Science & Analytics, HW1

1. (50 pts) Create a personal web page under CS.ODU domain (www.cs.odu.edu/~yourcsusername) or in any other domain (github). On this page you need to include your name, a photo of yourself (something professional), brief description of yourself (short bio), and PDF link to your 1-page resume.
 - a. You can use a free tool like [Kompozer](#) to create a visual layout and source page of your webpage or use a free [WordPress](#) template.
 - i. Move your files to your odu network home directory (secure_html) using the next steps. You can use the [vpn](#) connection from home and use ftp client like [filezilla](#) or sftp client like [winscp](#) to upload files directly to your secure_html directory. If you use an ftp client, use the host **linux.cs.odu.edu** and you should be able to see the secure_html directory, if not create one.
 - ii. Alternatively, you can use GitHub to host a template (yourusername.github.io). Here's a good [YouTube video](#) explanation on how to accomplish this. Also <https://github.dev/> gives you more information how to do this and some templates to start with.
2. (50 pts) Install and learn basic python by following the Module 2. Type in all commands or change the commands to see what happens. Initial at one of the following. (Note: You need to turn-in a PDF with a checkmark at the appropriate place with below statements)

I certify that I have installed Anaconda or similar python environment and have practiced python by following the Module 2.

I already know python and therefore I choose not to do this exercise. I understand that it is my own decision and I am responsible for all consequences.

What to turn in:

Submit the URL of your web page to Piazza HW1 Submission thread. Your website main page should contain a link to your one-page resume (you must have a downloadable pdf).

Submit the answer to question 2 in **Lastname-hw1.pdf** to Blackboard. Your pdf should contain the following information at the top:

CS620
