

CS 570 – Human Computer Interaction, Homework 1

1. Create a personal web page (nothing fancy, simple text/hyperlink version) in your CPP domain (www.cpp.edu/~yourcppusername). It will be where you place links to other writings/work you do during the quarter. On this page you need to include your name, a photo of yourself, and a brief description of yourself (short bio).
 - a. You can use a free tool like [Kompozer](#) to create a visual layout and source page of your webpage. Remember your main page should be named `index.html` or `index.htm` `index.php` etc. Move your files to your cpp network home directory using the next step.
 - b. You can use the [cpp vpn](#) connection and create network location in your computer to your cpp home directory (`\\files-www.cpp.edu`) or use ftp client like [filezilla](#) to upload files directly to your cpp home directory.

2. Include links to following PDF documents
 - a. Your one page resume.
 - b. Write a short (approximately 1 page) description of the best user interface you have used and why it is so good. What could be done to make it even better?
 - c. Write a short (approximately 1 page) description of the worst user interface you have used and what is wrong with it. How could it have been made better? Why do you think it turned out the way it did?

What to turn in: Submit URL of your web page to Piazza. The main page should contain links to the two short descriptions and your resume PDF files.
